

Best OS-Based Image for Hosting Nginx with Minimal Vulnerabilities

Reference:

Vulnerability Analysis of Docker Hub Official Images and Verified Images

It shows the major Docker image vulnerabilities using different scanning tools including Trivy. In our data below, we have scanned OS-based images to address and find the best OS-based image to host Nginx with fewer vulnerabilities and issues.

<https://ieeexplore.ieee.org/stamp/stamp.jsp?tp=&arnumber=10254755>

To secure a Docker-based image of the official and verified Nginx image, we need to analyze the Docker Hub official image as the first line of security.

- What tools can be integrated, and how can we analyze the image to ensure that the base image is secure for hosting Nginx on it?

To secure a Docker-based image of the official and verified Nginx image from Docker Hub, you can integrate various tools to analyze and ensure the security of the base image. Here are the steps and tools you can use:

1. Static Analysis of Docker Image:

- **Trivy:** A comprehensive vulnerability scanner for containers and other artifacts. It scans for vulnerabilities, misconfigurations, and secrets in Docker images.

```
chandan@chandan:~$ sudo snap install trivy
[sudo] password for chandan:
trivy 0.52.2 from James Luther (b34rd) installed
chandan@chandan:~$ trivy image nginx:latest

Comparison of all the Trivy results in a bar chart representation.

The results show a comparison of three major OS images in Docker. Alpine has the fewest vulnerabilities and is the best practice to use for deploying Nginx.
